AI Detector App – User Manual

Overview

The **AI Detector App** is a simple and intuitive web-based tool that analyzes any text and determines whether it was generated by **Artificial Intelligence (AI)** or written by a **human**. It's perfect for students, educators, writers, and professionals who want to verify the originality of written content.

System Requirements

- **Device:** Desktop, Laptop, Tablet, or Mobile Device
- **Browser:** Google Chrome, Mozilla Firefox, Safari, or Microsoft Edge
- **Internet Connection:** Required

How to Use the AI Detector App

Step 1: Open the App

1. Go to the website: **unicacloud.me/ai-detector**
2. You will see the **AI Text Detector** interface.

Step 2: Enter Your Text

1. In the white text box labeled **"Enter text to analyze"**, paste or type your text.
2. Minimum of **50 characters** is recommended for accurate results.
3. The word counter below the box shows the total words you've entered.

Step 3: Analyze the Text

1. Click the **"Analyze"** button below the text box.
2. The app will process your text and run AI detection analysis.

3. Wait a few seconds for the result to appear.

Step 4: View Results

- After analysis, the app will display whether your text is **AI-generated** or **human-written**, often with a probability score (e.g., *"90% likely AI-generated"*).
- Use this information to assess content authenticity.
